Goals & Objectives: <ul style="list-style-type: none"> Understand the core principles of global public health. Identify the key actors/stakeholders in global health. Understand the role that economic, social, political, and cultural factors play on health outcomes around the world. 			

- Understand the core principles of research and the ethical dimensions of global health.
- Examine some of the most critical global health issues facing the world today.
- Examine challenges associated with global health issues and the local/global efforts and strategies underway to prevent and control them.
- Understand the roles of other health care professionals and the need to collaborate with others in caring for individual patients and in promoting the health of defined populations; and
- Understand the challenges faced in creating and implementing a global health project or serving in global health and identify ways to overcome these challenges to avoid project delay, inefficiency, and failure.
